Cumulus® 10.2.2 Release Notes

This Cumulus version is a minor release comprising bug fixes and new features. This release improves all Cumulus products, including Workgroup, Enterprise, Web Client, Cumulus Portals, and Cumulus InDesign Client. With this release, Canto's Cumulus is now more efficient across all platforms for which it is developed.

The new features affect the Video Cloud support, Portals customization possibilities, and general user experience issues. For details, see the What's new in Cumulus 10.2.2 blog post.

Bug Fixes

Cumulus 10.2.2 contains the following bug fixes:

Platform (all, except if specified)	Software	Description
	Core	Using a complex query for searching in a CategoryItemCollection no longer throws an exception.
	Core	Fixed an issue that could cause the Cumulus Server to quit unexpectedly at the end of a backup.
	Core	Fixed an issue that could in rare cases cause the Cumulus Server to quit unexpectedly when removing sets (e.g. collections) that are expired.
	Core	Mirroring no longer erroneously logs an error when trying to deleting a category that has already been removed.
	Core	Initial field values will be set properly now, even if the cataloging user can't see the respective fields because the ,Restrict field visibility...' option is set.
	Core	Cumulus Vault no longer increases CPU usage at server side even if an error occurs when reading the data stream during a "Copy to" or "Check out" operation.
	Core	The performance for uploading files to a Vault has been significantly increased on Windows machines.
	Core, File System Companion	Fixed an issue that caused the server to consume lots of memory when searching.
	Adobe Integration	InDesign no longer hangs or unexpectedly quits even if InDesign Client works together with other third party plug-ins (e.g. Extensis font activation).
	Desktop Client	The Live Filter (Filter Panel) for String fields with "Does not Match" using a value "From Existing Values" works properly now: Records with the selected value are not found, but all others.

Platform (all, except if specified)	Software	Description
Window	Desktop Client	The Windows PowerPoint Add-In works properly now with the 64-Bit variants of Microsoft Office. The following versions are supported: Office 2010, Office 2013, Office 2016 .
	Desktop Client	The users list of the User Manger now properly shows date and time for "date" and "date (extended)" fields.
	Desktop Client Web Client	Fixed an issue with the "Record URL for Display in Web Clients". The URL works properly now (and can be opened in any browser).
	Filter	Fixed an issue that in rare cases caused the Cumulus Tool to quit unexpectedly when cataloging Excel files that contain multi-byte characters, like Japanese or Korean text.
	Filter	Fixed an issue that prevented proper color conversion for TIFF and DNG files with JPEG compression.
	Portals	Logging in again to Portals after the browser was closed without an explicit log-out from a previous Portals session, works properly now.
	Portals	After logging-in to Portals, the proper number of collections is displayed now (up to 99 items).
	Portals	The "Reset Password" option is no longer erroneously shown if it is explicitly configured to be not available for users.
	Portals	The Upload Collection landing page no longer erroneously provides download and print buttons.
	RoboFlow	SFTP with host keys supported. JSCAPE SFTP.jar version 9.3+ required
	Web Client	Various UI enhancements (especially toolbox related).
	Web Client	Fixed an issue that prevented the preview of related assets.
	Web Server Console	Various UI enhancements
	Web Server Console	Fixed an issue that prevented changes in the Log Manger of the WebServer console to be saved properly.

For developers only:

Platform (all, except if specified)	Software	Description
	CIP & SDK	The "addCheckBox" method works properly now and adds a check box which is enabled or disabled according to the given parameter.
